

C-TEC SERIES OF DC BUFFER MODULES WITHOUT BATTERIES USING ULTRA CAPACITOR TECHNOLOGY

Battery free DC buffer modules utilizing Ultra capacitors.
Maintenance free with compact design to IP20.
With up to 20 years life depending on temperature.

Wide operating temperature range -40 deg C to +60 deg C.
No gas emissions and can be used in enclosed cabinets.

Fast recharge cycle after discharge.
Deep discharge protection.

The C-TEC series of DC buffer modules works using Ultracapacitors for energy storage within the housing. If the DC power is interrupted the energy stored in the Ultra capacitors is released. The load is energised from the buffer module until it is discharged. The back-up time is dependant on the state of charge of the capacitors and on the discharge current. Compared with normal buffer modules with capacitors the new C-TEC range offers longer back up times. This is dependant on the energy of the capacitors and is calculated as follows:

$$\text{Back up time} = \frac{\text{energy}}{\text{voltage} \times \text{current}} ; \quad \text{with fully charged capacitors} \quad \frac{10000 \text{ Joule}}{24\text{V} \times 10\text{A}} = 50 \text{ seconds}$$
